Attestation virus efficacy of Lerasept® Aktiv

Dear Sirs and Madams,

the disinfectant product **Lerasept® Aktiv** has been successfully tested according to EN 14675 with the test virus:

- Bovine enterovirus type 1

This test organism used in the EN14675 was chosen as "worst case" organism, so that a variety of virus types are covered with this test. According to this test result the product **Lerasept® Aktiv** can also be claimed as effective against all enveloped virus like Orthomyxoviridae (all human and animal Influenza viruses like H5N1) Asfarviridae (like African Swine Fever) or Flaviviridae (classical Swine Fever).

In the test of **Lerasept® Aktiv** a virucidal efficacy was determined at 10°C with a product concentration of 0.25% in 5 minutes. If the contact time is prolonged to 30 minutes a product concentration of 0.12% is sufficient. For safe disinfection the determined values have to be kept. Before disinfection a thoroughly pre-cleaning is urgently recommended.

Kind regards
